

GOALS: MAKING IT WERK

LEARNING KIT

Achievement Mindset

Like all our other subjects, GOALS: Making it Werk is also anchored to the Emotional Intelligence concept:

Self-awareness:

Identify personal development goals and understand how these align with PSG strategies.

Self Management:

Effectively managing emotions, impulses, and resources in order to achieve goals

Relationship Management:

Building support network, connecting with others in pursuing goals, and navigating any interpersonal challenges that may arise.

OpsWerks Method

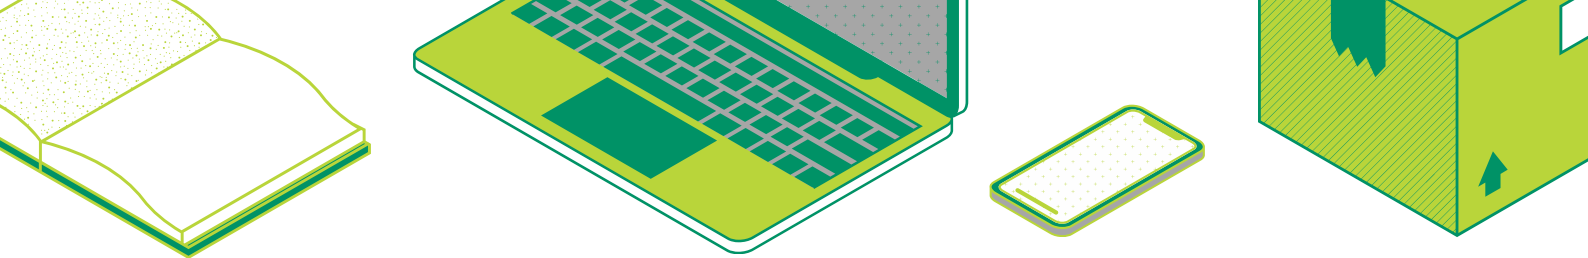

Our GOALS should also support and apply our methods such as:

Be the anteambulo

Empowering members to set and achieve impactful goals aligns closely with paving the way for others. By teaching essential emotional intelligence skills and linking personal development with PSG strategies, participants are equipped not only to achieve their own goals but also to potentially inspire and guide others in their goal-setting endeavors.

Make it Meaningful

By helping participants align their goals with their values, aspirations, and personal development, the course aims to ensure that the goals set are meaningful and contribute to the overall growth and fulfillment of all members.

Why are goals important?

We all know that goal setting is important, but we often don't realize how important they are as we continue to move through life.

Goal setting does not have to be boring. There are many benefits and advantages to having a set of goals to work towards.

Setting goals helps trigger new behaviors, helps guides your focus and helps you sustain that momentum in life.

Goals also help align your focus and promote a sense of self-mastery. In the end, you can't manage what you don't measure and you can't improve upon something that you don't properly manage. Setting goals can help you do all of that and more.

You can also refer to your Team's Almanac Page and find your Team's 2022 Goals.

Individual Contributor (IC) Role Level & Expectations

The concept of a career path at OpsWerks has changed a lot over the past seven years. We've gone through various phases as an organization: beginning as an early-stage startup where everyone did a bit of everything, then to a period when we decided against having managers and leaned into a flat structure, and now to a lean level of management within a more traditional structure. We're expecting to grow some more...As such, we've been asking ourselves, "What does a career path look like for someone at OpsWerks?"

At the core of this question is the unspoken acknowledgment that it's often unclear how to level up when your team size isn't scaling up. *Not everyone can be a people leader*, so how does a teammate grow beyond her or his current role? *Is it possible to grow horizontally rather than vertically?*

To answer this, leaders on a few of our teams have come together to create a formal career framework that includes growth opportunities beyond the traditional people leader track. We'd love for individual contributors to have an equal path for furthering their career and developing their skills. Here's what we're trying, what we've learned so far, and how you can get started on your own multifaceted career framework.

Direction

Vision, Strategic Planning, Identifying Gaps and Solutions.

Core Expectation: Grow and Go

People

Team/Org Building & Health, Cross-functional Partnerships, Company Contributions, and Influencing Skills.

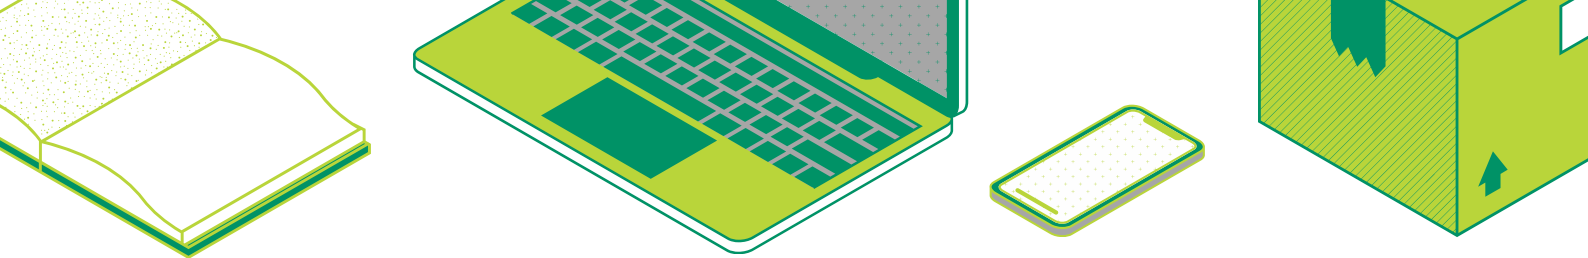

Core Expectation: Be the Antebulo & Build Healthy Community

Execution

Team/Org Performance & Execution, Knowledge & Expertise, Communications.

Core Expectation: Make it Meaningful

SMARTER GOAL

SMART goals were initially created by George Doran, Arthur Miller, and James Cunningham. They were invented to help organizations set and allocate meaningful objectives amongst their teams.

Since their inception, SMART goals have been utilised in both businesses and personal lives of people who are looking to set specific goals for themselves. Whilst they have been modified multiple times and even added to over the years (Such as the SMARTER model), the central concept remains the same – create a clear goal that you are motivated to achieve.

The SMARTER acronym we are looking at today is; Specific, Measurable, Achievable, Relevant, Time-bound, Evaluate and Reward. Let's take a look at what these actually mean in the context of goal setting.

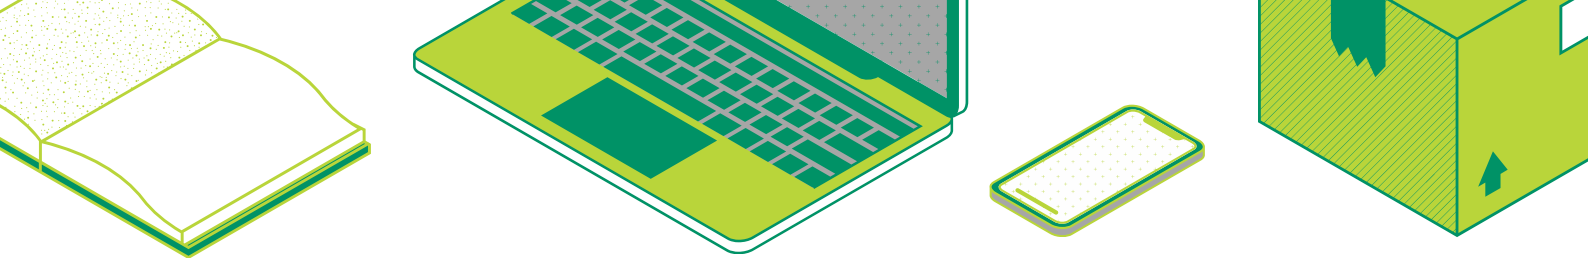

Specific

To make a goal more meaningful, it's necessary to be specific about the long- and short-term goals to be achieved along with identifying the strategy for achieving each outcome.

A good way to get SPECIFIC is using the old communications trick for open questions; 5 Ws and a H.

- Why do you want this? / Why is it important?
- What do you want to accomplish or obtain?
- When do you need to do this? When can you start?
- Where do you need to go? Where will your actions take place?
- Who do you need to become? Who's help will you need?

These should help you frame your goal into a specific and clear focus point, meaning we can move to the next step – Measurable.

Measurable

How exactly will you know if you've succeeded in achieving the goal?

What does success look like and how can that be communicated to the organization?

Of equal if not greater importance: how will you measure progress along the way and evaluate if you're moving in the right direction at the right pace?

Designating specific milestones or key results is a powerful motivator and helps drive understanding around progress during performance reviews & feedback sessions.

The importance of being able to track your goals has been highlighted by the American Psychological Association in their 2016 Study "Does Monitoring Goal Progress Promote Goal Attainment?"

"Our conclusion is that progress monitoring has a robust effect on goal attainment and constitutes a key component of self regulation."

We can see then, that by making the goal measurable and monitoring our progress, we are more likely to achieve the goal, help us grow and go, and become more disciplined as well.

Once we have selected a metric to measure the goal by, we need to know whether this is actually attainable.

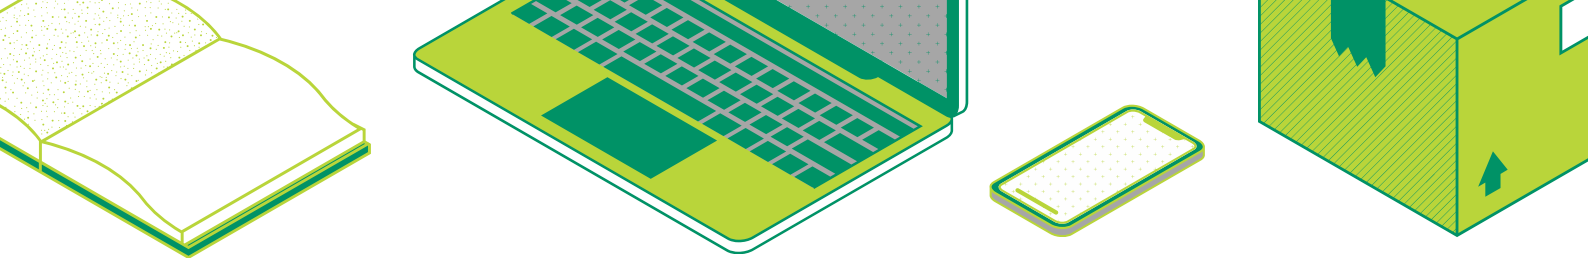

Attainable

To have strong performance you must have high expectations of success. This means that the goal will need to be challenging but possible for you to achieve.

Look at your skill set, strengths, and tools, figure out whether the goal will stretch you and make you grow to achieve it.

Consider the steps will you need to take, the skills you will need to acquire and who you will need to become in pursuit of this goal.

Once you have confirmed that your goal is achievable, it's time to look at how relevant your goal is.

Relevant

Be sure your goals are relevant to BVMMs and the PSG expectations and strategy. When we develop goals that align with organizational goals, we understand the importance of our work and feel a greater sense of purpose and motivation. Likewise, alignment of our goals with their team's goals is equally important and results in greater team performance. Alignment to broader objectives also helps identify priorities when time and resources are constrained.

Consider the following questions when you are checking the Relevance of your goal:

- Why is it significant?
- Is it worthwhile?
- Is this the right time?
- Does this align with other efforts/needs?

Consider how relevant your goal is to OpsWerks BVMMs and PSG Goals and Strategy. By the end of these questions, you should feel connected to your goal and motivated to get started.

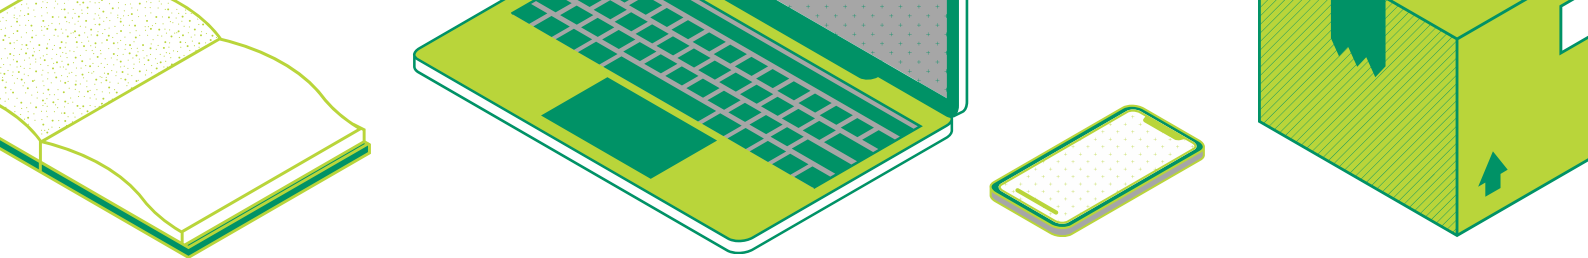

When our goals are relevant, we are more likely to stick with it and can look at the Time-bound element.

Time-bound

An end date enables you to have a clear focus in your mind when you will need to accomplish your goal. Remember that the best goals are challenging but possible – consider a time frame that will ensure you are being productive with your time. If it is too short, you may burn out trying to achieve it. If it is too long, you may put off taking action.

Some questions to consider:

- When is the soonest I can achieve this?
- What happens if I don't accomplish it on this date?
- What would be a realistic time for me to complete this (use a mix of your experience and research to judge)
- Are there any upcoming and important events?
- Does my goal need to be broken down into smaller time-bound chunks?

This is where the original SMART model ends and while you will now have a comprehensive and clear goal, with an understanding of what success will look like. By ensuring it is relevant and achievable, you should also have positive expectations for achieving your goal.

In OpsWerks, it's important for us to track progress and outcomes of our goals as well. The next two steps are valuable and worth understanding further to get the most out of your goals:

Evaluate

Checking your progress is vital to getting the best out of your actions. Any company that values success will have a quality assurance framework to test its products, the same should be true of OpsWerks and our goals.

If we only take action and do not evaluate our work, we are doing ourselves a huge disservice. If you are not evaluating your performance, how can you know what is working well, what needs improving and what needs stopping all together? Spending time evaluating your progress will help you shape your future expectations, improving your skillset and focus on improvements.

Consider asking yourself:

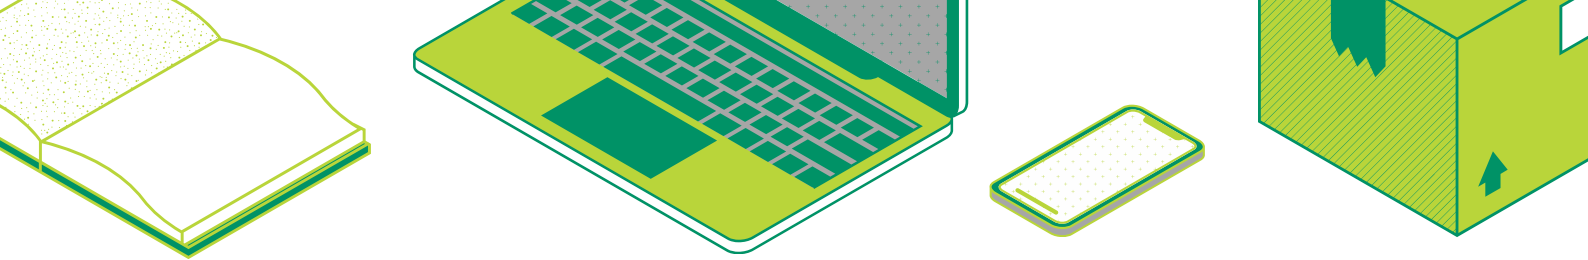

- What went well
- Why did it go well?
- What could have gone better?
- Am I where I need to be?
- What improvements can I make?
- Am I still on track?
- What can I learn from this?

The final step of the SMARTER model is Reward.

Reward

To keep your motivation levels high, ensure that you are celebrating your successes along the way, not just once you've completed the goal.

Your rewards don't have to be extravagant or excessive but it is important to celebrate all of your little successes. This will help you become more aware of your wins in the future and keep you engaged in your goals.

Summary

Specific

- Be as detailed as possible.
- Use figures/measurements that make the goal tangible.
- Get a crystal clear vision on what success will look like.

Measurable

- Ensure that you are able to track your success.
- Use real metrics such as numbers, time, and so on.
- Give yourself set criteria for success.

Achievable

- Can it actually be done?
- Your goal need to be difficult but possible.

Relevant

- Ensure your goal has a point, it should get you closer to your purpose and OpsWerks BVMMs.
- Is it worthwhile?
- Is it the right time?
- Are you the right person for this objective?

Time-bound

- When should your goal be achieved?
- Setting a time can keep focus on the goal.
- It can also give you an end date to celebrate by

Evaluate

- Look at this as a trial performance review.
- What could have gone better
- What will make us more effective next time.

Reward

- Celebrating your achievements encourages you to continue.
- Reward yourself throughout your goal, not just at the end
- Scale your reward to your achievement

Goal Writing Guide Questions

SPECIFIC	• <i>What</i> exactly do you want to accomplish? • <i>Why</i>: What are the reasons, purpose or benefits of accomplishing the objective? • <i>Who</i> is involved? Who are the stakeholders? • <i>Where</i> is it going to happen? • <i>Which</i> attributes are important? (Requirements and constraints; risk and protective factors).
MEASURABLE	• How will you know when objective is accomplished? • What indicators will you look for to measure progress and success? • Are data to measure your progress and success readily available? Or do you need to develop new measures, e.g., surveys, focus groups, etc...?
ATTAINABLE	• Do you have sufficient financial capacity to accomplish your objective? • Do you have personnel with sufficient abilities and skills to accomplish your objective (including evaluation)? • Do you have sufficient time to accomplish your objective? • What other types of resources do you need to attain your objectives (i.e., technology, space, equipment, etc...)?
RELEVANT	• Does this align with other OpsWerks efforts/needs? • Is this goal aligned with the broader strategy or do we need to pivot? • How should we be prioritizing given any new information we have?
TIME-BOUND	• When will achieve this objective? • When will we undertake activities to achieve our objective? • When can we expect to see some short-term outcomes?
EVALUATE	• How are we progressing? • Are we on track to hit our next milestone? • What wins have we had? • What challenges or blockers are appearing? • Are our actions and approach still appropriate or is course correction needed?
RECOGNIZE	• What skills did I develop while doing this goal? • What skills do I need to enhance more • How can I give back to the people who helped me achieve this goal? • What is something I can do or give myself once this is achieved?

Setting goals can help us move forward in life.
It gives us a roadmap to follow.

Goals are a great way to hold ourselves accountable,
even if we fail.

Setting goals and working to achieving them helps us
define what we truly want in life and continuously
contribute and live out OpsWerks BVMMs.
